

EASYSIGN

PRINT SERVER

The ultimate in RIP and print solutions has much more to offer

Be prepared for everything that is coming your way. Everything you need for printing is now available in this state of the art software.

Increased Compatibility

Compatible with all major third party design software
If you or your customers currently use design software that can export or print, you can RIP and print everything. Just place or export an EPS, AI, PS, TIFF, JPEG, PDF, PSD, BMP, etc. in a predefined hot folder and the software does the rest. Become fully compatible with all the major file formats through the new JAWS™ Postscript™ import filter that reads EPS, PS and is optimized for advanced PDF handling.

Integrated with EasySIGN design licenses

If you already own an EasySIGN design license, you can start printing new or existing worksheets immediately. If you are not yet familiar with the EasySIGN design licenses, visit our website and get to know the professional design and editing capabilities of this powerful software.

More power

Speed up your printing process with the fastest, most reliable RIP software on the market. Our superior printing speed is achieved with advanced optimization and user-definable multitasking of the software using the latest computer hardware to its fullest.

Optimized for multiprocessor and Intel™ HT technology. RIP on the fly, RIP a file and immediately send the processed data to the printer. Control multiple printers at the same time and send multiple jobs to various printers simultaneously while continuing to prepare new jobs within the software.

Higher Quality

The all new HDRE™, High Definition RIP Engine, prints colors and gradients like never before. Give your printer a quality boost with all new 64 bit dithering for smoother and more accurate pictures.

Greater Flexibility

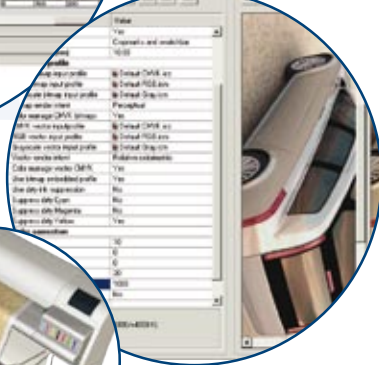

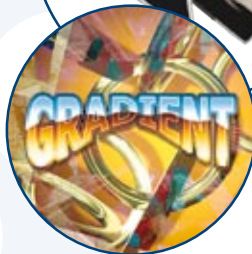

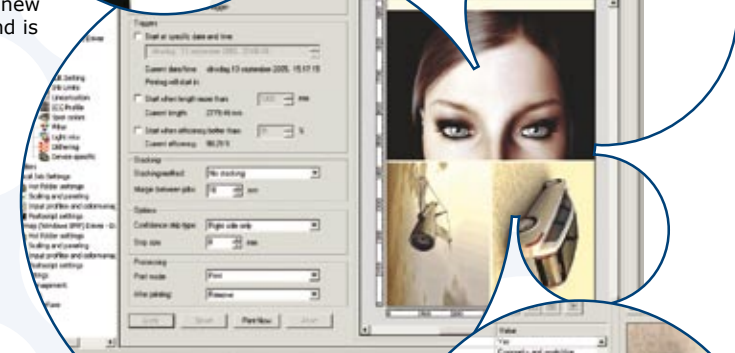

Unlimited number of hot folders with fully customizable settings per folder. Receive jobs from network clients.

User mode and administrator mode: create the RIP, print and material settings within the full administrative mode, then switch to the clear and easy to handle user mode to manage print jobs. An unlimited number of settings per device allow a setting for each material you use to ensure consistent quality. You can even create a customer-linked setting for repeat jobs.

Completely customizable unattended printing. You decide when jobs start and finish and with advanced error handling material waste is prevented.

More Color Control

The software uses standard ICC/ICM color profiles so input profiles may be selected for all possible situations. Supports all 6 color ink sets, including CMYKOG, CMYKRB and others, while

also supporting CMYK, Grayscale and RGB profiles (ICC and ICM), as well as many advanced color management settings such as dirty ink suppression.

Create your ICC profiles with EasySIGN ezColor. Have a new material but don't yet have a profile? Make your own ICC profiles in minutes, with the new and easy to use scanner calibration. There's no searching for a profile to fit your new material, you can just make your own.

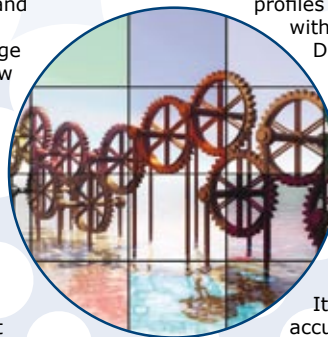

Unique visual or scanner linearization and the ability to create profiles with a scanner and scan target are all possible without the need for color measurement devices.

Disable color management for CMYK vector/bitmap.

With the soft proofing option, you can simultaneously view a job before and after color management.

Need some quick color correction on a job? You can adjust Red, Green, Blue, Brightness, Saturation and Contrast on a per-job basis or for a complete hot folder setting. You can even output any job in grayscale.

It also features superior spot color calibration for accurate fine-tuning of named colors.

PRINT SERVER

More output control

Use all available drivers. Output to local port, Windows Printer, TCP/IP network, File, Network share and USB ports.

The automatic stacking and nesting feature is available to output even your largest jobs. Fine-tune the stacking results with your mouse by visual on screen re-arrangement of the jobs in the print preview mode.

With automatic or manual tiling to handle even the largest jobs, you can select or deselect the tiles that need to be processed.

More Print and Cut possibilities

Intuitive workflow for all your print and cut applications on any hybrid machine.

In combination with an EasySIGN designing license, you can even use any printer and cutter combination for your print and cut jobs.

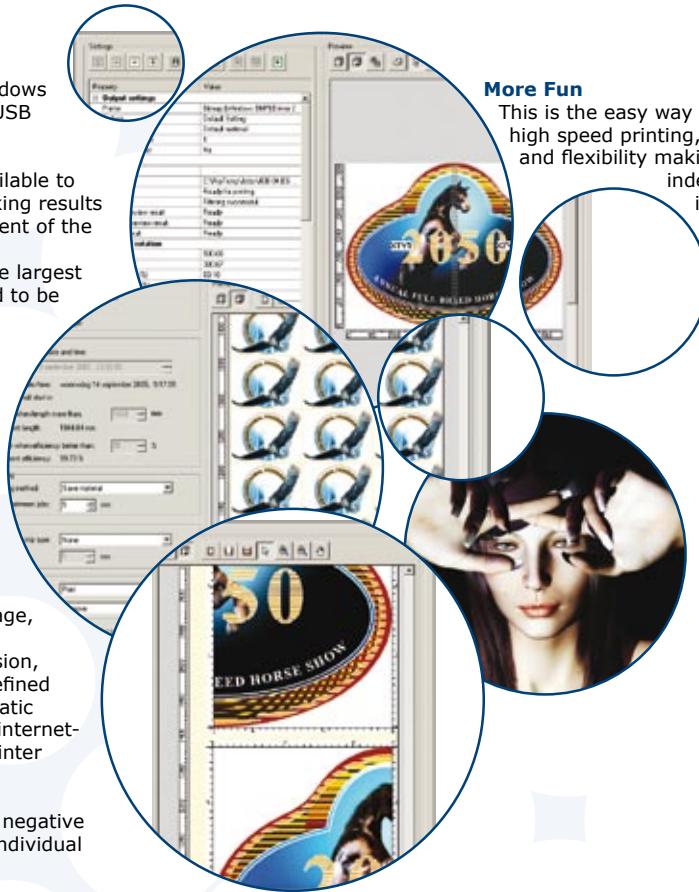

More job control

Accurate job previewing, adjustable job copy quantity and spacing, scale job to size or percentage, rotate jobs and mirror jobs. Apply different types of raster diffusion with, among others, Error diffusion, all-new, superior Stochastic Diffusion with user-defined settings and more. Print extra information, automatic crop marks and more. We have even included an internet-enabled logbook, making it possible to monitor printer output from another location.

On screen, automatic or manual tiling. Positive or negative tiling overlap and the ability to enable or disable individual tiles.

More Fun

This is the easy way of working, with high speed printing, superb reliability and flexibility making life easy and indeed more fun in creating your printed artwork!

Differences between EasySIGN Version 5 Print Server Pro and Master	Print Server-Pro	Print Server-Master
Multiple devices can be installed and printed to simultaneously	1	5
Adjustable number of simultaneous filters, jobs and prints	1	5
User controllable worker threads	x	✓
Spot color list to manage named colors	x	✓
Internet enabled logbook	x	✓
Start print at specific date/time	x	✓
Start print on rendered length	x	✓
Start print on efficiency	x	✓

More features

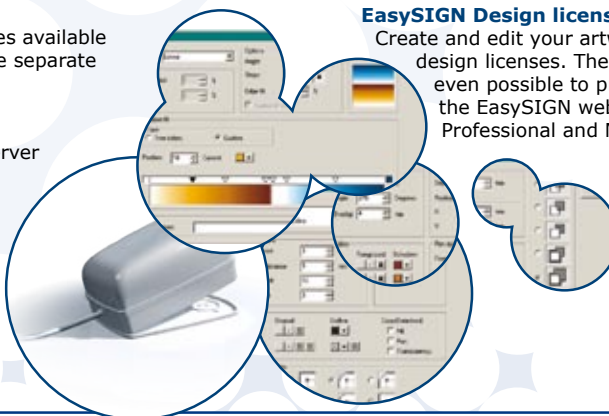

For a complete overview of all features available in the various licenses, please see the separate features list.

EasySIGN Version 5 Options

Extend the capability of your Print Server license.

ezColor™

Create your own high quality ICC profiles with just a desktop scanner and a supplied scanner target. The award winning Monaco ICC engine provides you with consistent color management throughout your entire printing process.

EasySIGN Design licenses

Create and edit your artwork by adding one of the EasySIGN design licenses. The fully integrated workflow makes it even possible to print and cut on separate devices. See the EasySIGN website for details on EasySIGN Starter, Professional and Master.
